

Hygienic Surface Cleaner Removes and Prevents Biofilm, Based on AHP Technology, and is Biodegradable

When looking for a good cleaner, you want it to meet several criteria. It should be easy to use, environmentally friendly, and most importantly, highly effective at cleaning. The Oxi-clean™ cleaner meets all these requirements.

Oxidizing

As the name suggests, the Oxi-clean™ cleaner is an oxidizing cleaner. This offers several advantages. The oxidizing action with AHP (Advanced Hydrogen Peroxide) loosens organic dirt more effectively, cleaning surfaces better and faster. The surface-active cleaner leaves no residue (biofilm) behind, eliminating sticky surfaces and unsightly streaks. Additionally, the cleaner is safe for people, animals, and the environment. It can be used on all surfaces (except lime-based surfaces) and has a pleasant fragrance.

Environmentally Friendly

Cleaning products are generally not very environmentally friendly. However, this is not the case with Oxi-clean™. Not only is its active ingredient completely biodegradable, but the sustainable spray bottle can also be refilled with large jerry cans of 5 or 10 liters. The Oxi-clean™ cleaner is designed for direct cleaning of surfaces such as treatment tables, workbenches, operating tables, and reception desks. It is also suitable for cages and enclosures of small pets, as well as floors, storage areas, and animal living spaces.

This cleaner offers an unparalleled broad spectrum of action. It combines cleaning with what can be considered pre-disinfection, making it ideal for various surface cleaning applications in both human and veterinary care. Available as a ready-to-use solution and as a concentrate.
