Product

What is **TensionCARE®?**

TensionCARE® is an innovative rein tension sensor with two sensors that are attached to the left and right reins of the horse. These sensors precisely measure the rein tension exerted by the rider on the horse's mouth.

This helps prevent overexertion and muscular imbalances – an important contribution to your horse's long-term health and wellbeing.

All rein data is transmitted wirelessly to a smartphone or tablet. Refined riding in real time – for more harmonious communication with your horse.

Users

Who is **TensionCARE®** designed for?

Ideal for individual riders

For trainers and students

TensionCARE® BASIC

For riders

Refine your feel in the saddle and develop more subtle rein aids.

Receive instant feedback via your smartphone and improve communication with your horse.

TensionCARE® Now available in two versions – exclusively in our online shop.

TensionCARE® PREMIUM

For trainers

Monitor the interaction between riders and horses in real time – with a range of up to 100 metres – directly via the app. You can also record the data, allowing you to review rein tension together with your students afterwards and make training even more effective.

For owners

You can't be there every time your horse is ridden – but you still want to know it's in good hands. With TensionCARE, you can follow what's happening in the saddle, even from a distance. Set gentle limits and get notified if your horse's wellbeing could be at risk.

Why it matters to you

For a sensitive connection
and a horse in perfect balance

Train your rein contact with awareness and sensitivity.

Develop a finer feel for the reins, for softer, more effective aids

Understand your signals and communicate more clearly.

Discover how your horse truly responds to your aids and fine-tune your communication for a deeper connection.

Protect your horse's health and prevent harmful strain.

Avoid tension, muscular imbalances and unnecessary pressure caused by overly strong rein aids.

Improve balance and posture for lasting lightness.

Help your horse move in true balance and with ease.

Features & Details

The Sensors

Measuring range

Measures rein tension up to 30 kilograms

Durability

Withstands pulling forces of up to 100 kilograms – robust and waterproof

Technology

Smart electronics for precise tension detection

Auto-calibration

Automatic zeroing for accurate measurements

Health protection

Detects harmful rein pressure early and helps prevent incorrect loading

Wireless

Stable wireless connection via Bluetooth or gateway

Made in Germany

Patent-pending technology & registered trademark with the German Patent and Trademark Office (DPMA)

The App

Easy setup

Quick and hassle-free installation

User-friendly

Intuitive interface for smooth navigation

Live feedback

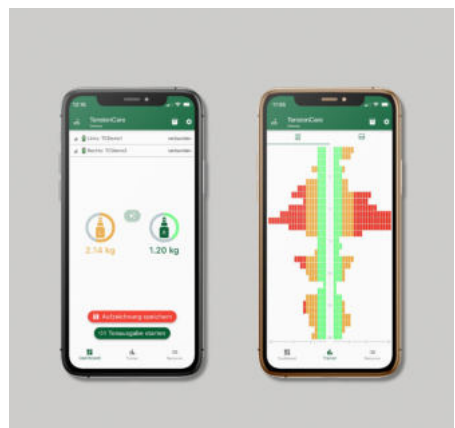

Voice prompts, warning sounds, and real-time raw data display

Responsive design

Optimised for all screen sizes
